

IMI Systems' Next Generation Artillery Systems

IMI Systems successfully demonstrates its innovative artillery systems to senior officials from 17 countries

Ramat Hasharon, Israel, November 16, 2016. IMI Systems (formerly Israel Military Industries) last week demonstrated a full spectrum of its advanced solutions for the next generation of artillery systems to a gathering of senior officials from 17 countries including a number of NATO members.

The presentation showcased live firing of the *Accular*, a high precision guided rocket for ranges of up to 40 km, the highly accurate 155 mm shell developed by IMI Systems in cooperation with BAE Systems Rokar, and an activation of EXTRA missile 120kg warhead. The EXTRA missile is designed to attack qualitative targets from 30 km up to a range of 150 km.

In addition, IMI Systems presented advanced artillery radars manufactured by Elta, a UAV from Elbit, and a regional meteorology system made by the Mer Group.

The event, which took place at an undisclosed IDF firing range located in southern Israel, was hosted by IMI Systems' newly appointed Chairman, Mr. Yitzhak Aharonovitch, and CEO, Mr. Avi Felder.

“The success of this demonstration further enhances IMI Systems' already established position as a world leading systems house for unique artillery systems,” said Mr. Aharonovitch.

About IMI Systems Inc.

Established in 1933, IMI Systems (formerly Israeli Military Industries) is a defense systems house specializing in the development, production, marketing and implementation of end-to-end solutions for land, air, naval and homeland security (HLS) applications.

Globally recognized as a leading provider of combat-proven solutions for the modern battlefield, IMI Systems' innovative artillery, rocket and mobility offerings incorporate extensive operational experience, advanced technologies and exclusive methodologies developed for the IDF, US Military, NATO nations and military and government agencies in over 70 countries. Today, more than 70% of all IMI Systems' products are exported to customers around the world.

The company, which is wholly owned by the state of Israel, employs 2,900 personnel active in 6 business units: Armor, Infantry, Artillery, Air & Naval, HLS and Small Caliber Ammunition, alongside production, testing and laboratory facilities and two subsidiaries: the Security & Anti-Terror Training Academy, and the Ashot Ashkelon Industries aerospace solutions provider.
